

Instruction

Earthquake Emergency Procedure System

Earthquakes occur without warning. For their safety, children shall be taught methods of protecting themselves.

The Superintendent or designee shall establish an emergency procedure system to be followed in case of earthquakes. This system shall include, but not be limited to, the following:

1. A school building disaster plan, ready for implementation at any time, for maintaining the safety and care of students and staff. This plan should outline roles, responsibilities and procedures for students and staff.
2. A DROP procedure, whereby each student and staff member takes cover under a table or desk, drops to the knees, protects the head with arms, and faces away from the window.
3. Protective measures to be taken before, during and after an earthquake.
4. A training program to ensure that all students and all certificated and classified staff are aware of, and properly skilled in, the earthquake emergency procedure system.

Drop procedures shall be practiced at least once each school quarter in elementary schools and at least once each semester in secondary schools.
